

make ideas happen, work with us

About Thecla and The Crew

Thecla AS was founded in Bergen, Norway, in July 2016. We are proud to be equipped with the talent needed to create complete Internet innovations that will expand the Internet of Things in countless markets, across the globe.

We have the experience, motivation and creativity needed to bring forward what we call Disruptive Software. We are working internationally and all our products are developed in Norway.

The Thecla Crew

We are dynamic people with broad expertise in various industries:

Communication and transaction solutions (kindergardens, driving schools, elderly care, business broker properties), app development, retail and telecommunication. As we speak, we are working with the following portfolio provided by Intutor Group AS: BonaMea.com, Kura.no and MyKid.no

IoT

The Internet of Things (IoT) is a system of interrelated computing devices, mechanical and digital machines, objects, animals or people that are provided with unique identifiers and the ability to collect and exchange data over Internet without requiring human-to-human or human-to-computer interaction. It is estimated that the IoT will consist of almost 50 billion objects by 2020.

Our task is to be the preferred partner for technology and software development for IoT.

The Thecla Mission

We will make the world smarter with the use of disruptive software combined with the best hardware.

IoT

A World of
Options

Properties

Human Care

...

The Wireless Sensor

The sensors are self contained, ultra-miniaturized wireless device containing function-specific sensor with a lifetime up to 15 years. As we say: Install and forget. The sensors are fully sealed for absolute robustness. Each sensor comes with SecureDataSpot™ technology, providing a highly encrypted wireless connection with range up to 400 meters.

The Complete Solution

We are offering an end-to-end solution with our own technology that are capable of monitoring almost anything. That is what we call Internet of Things!

We take care of measuring and delivering the data on great software solutions. So you can focus on your customers and your business.

- small size
- long life
- long range
- totally robust
- touch pair™

Companies using Thecla disruptive software

BonaMea.com - Launch Q4 2016

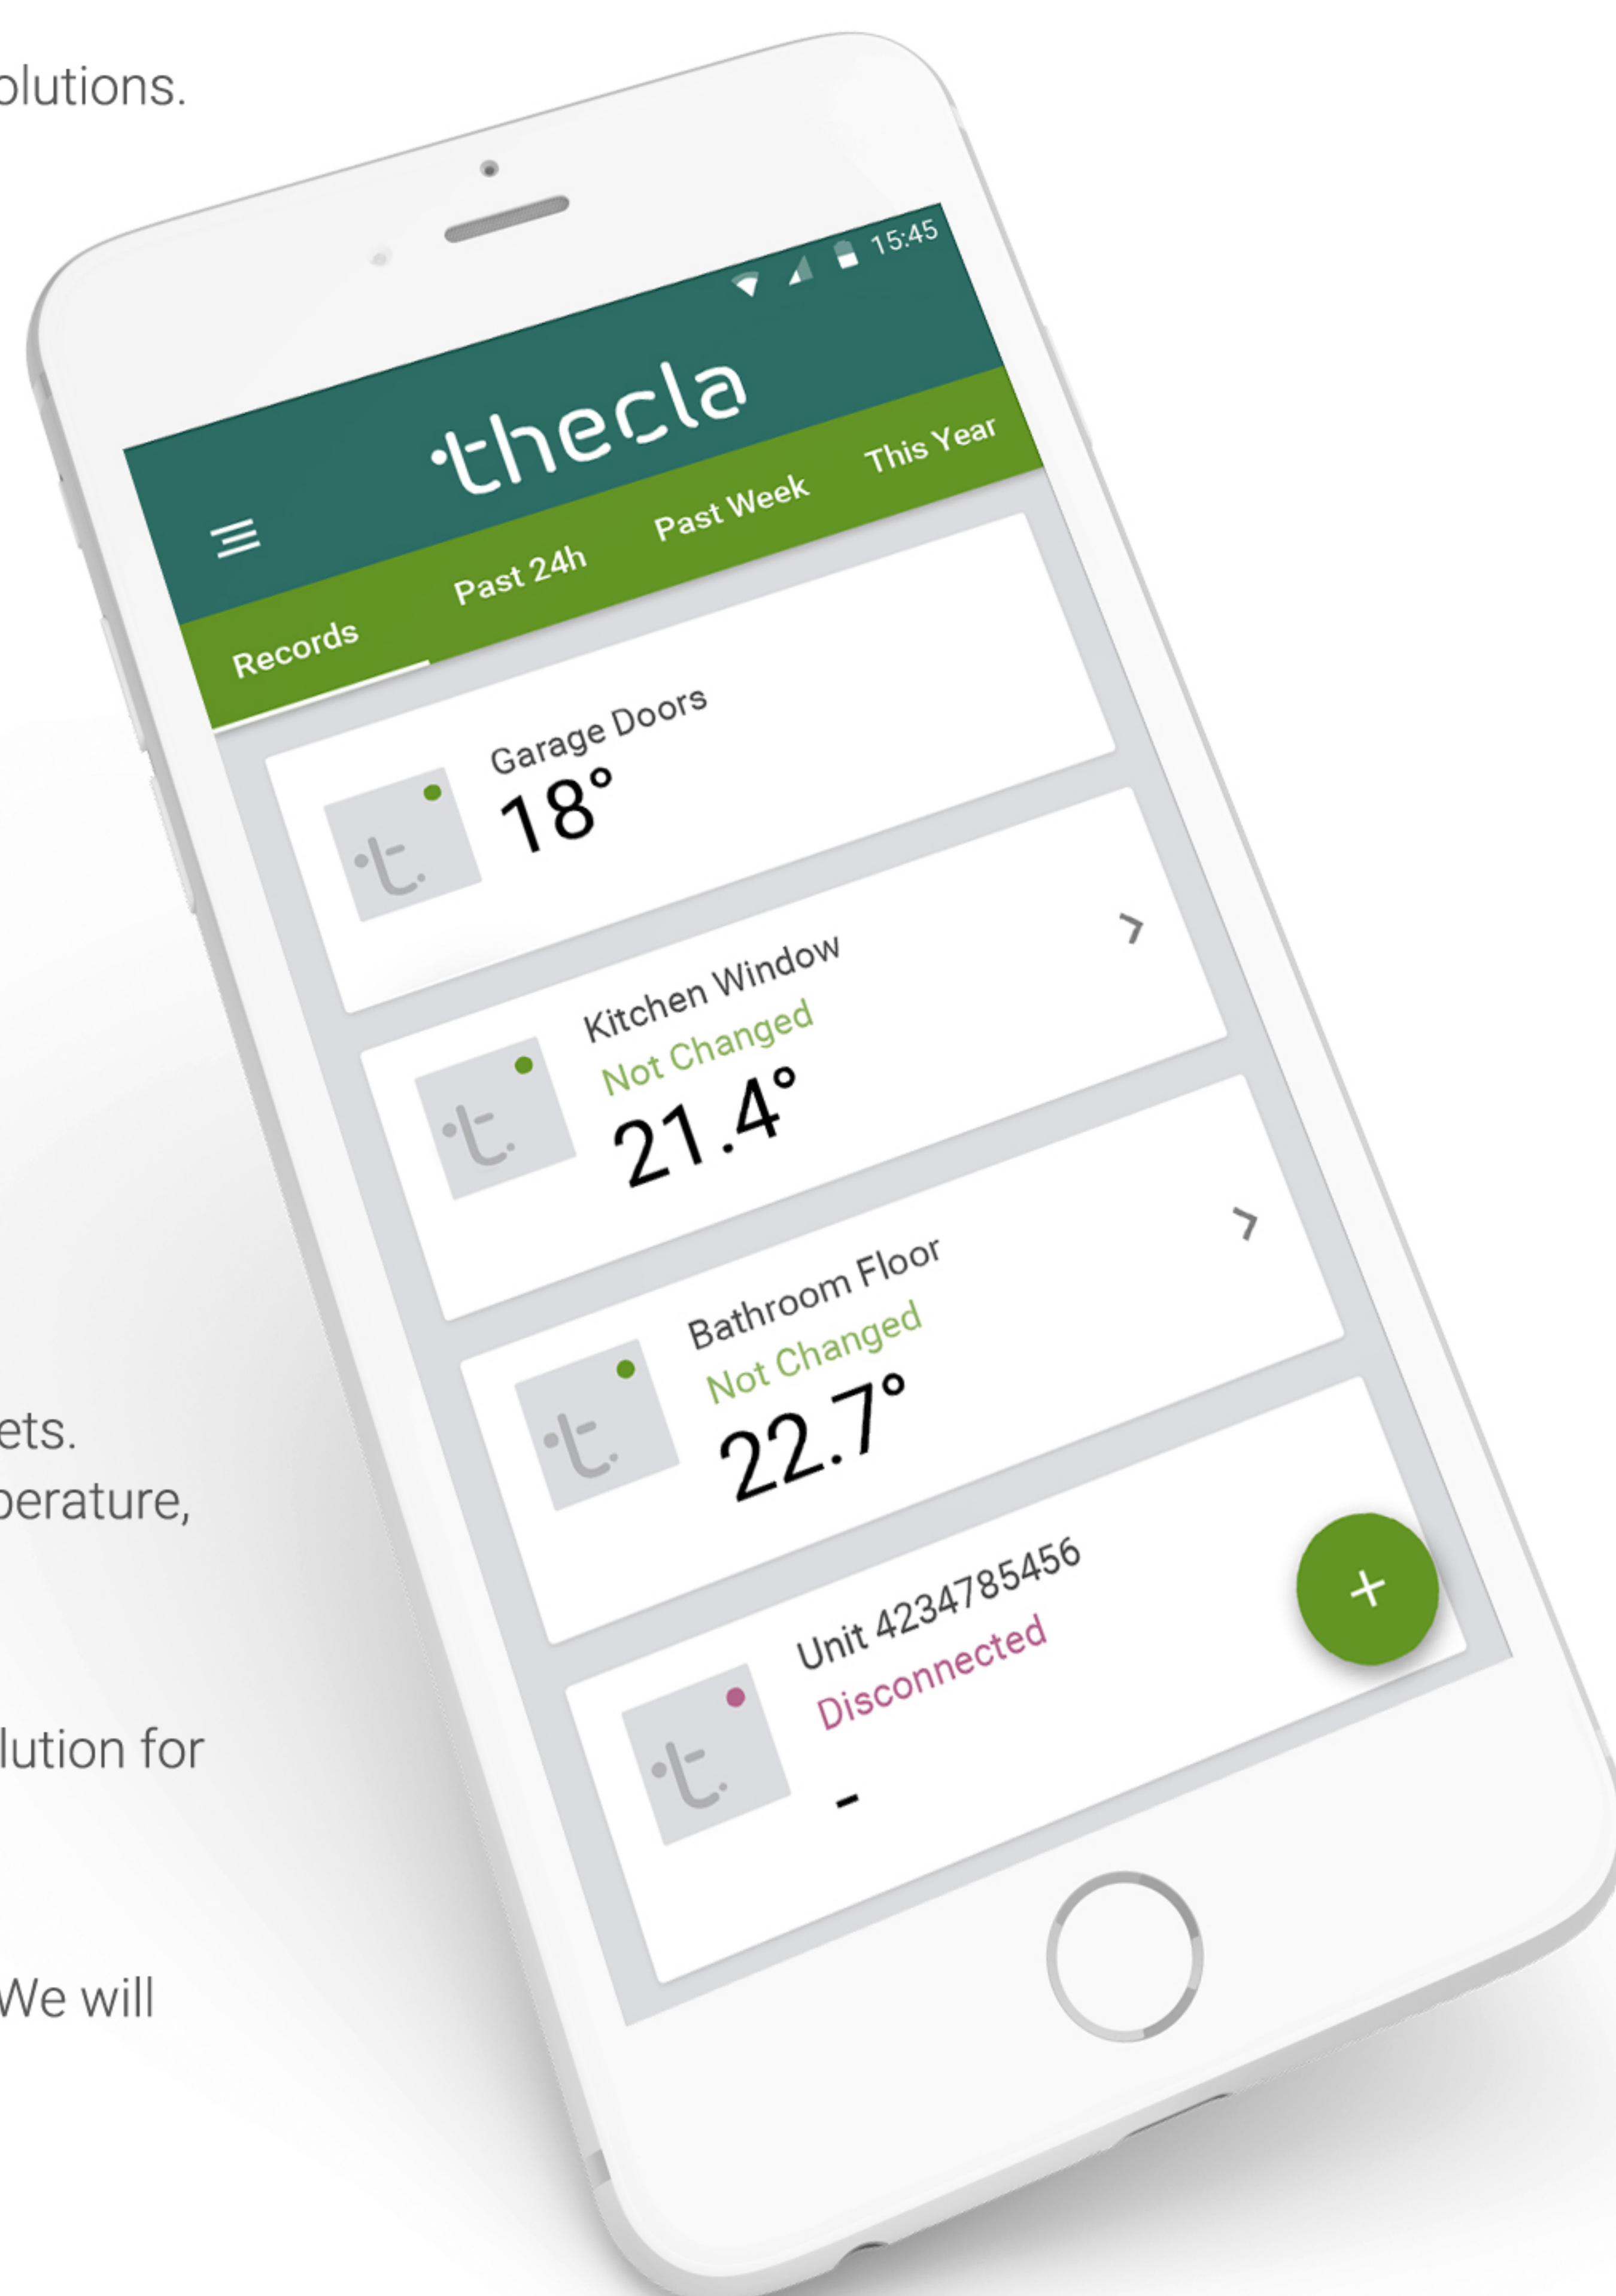

BonaMea is a online solution for complete control of your property assets. We will deliver the solution for monitoring the buildings (windows, temperature, deviation, doors)

Kura.no - Launch Q2 2017

Kura is a communication system for elderly care. We will deliver the solution for monitoring temperature and deviations.

MyKid.no - Launch Q2 2017

MyKid is a communication and transaction system for kindergardens. We will deliver the solution for monitoring temperature and deviations.
